# 1.5-Gbps LVDS/LVPECL/CML-TO-CML TRANSLATOR/REPEATER

FEATURES

- **Provides Level Translation From LVDS or LVPECL to CML, Repeating From CML to CML**
- **Signaling Rates[1] up to 1.5 Gbps**
- **CML Compatible Output Directly Drives Devices With 3.3-V, 2.5-V, or 1.8-V Supplies**
- **Total Jitter < 70 ps**
- **Low 100 ps (Max) Part-To-Part Skew**
- **Wide Common-Mode Receiver Capability Allows Direct Coupling of Input Signals**
- **25 mV of Receiver Input Threshold Hysteresis Over 0-V to 4-V Common-Mode Range**
- **Propagation Delay Times, 800 ps Maximum**
- **3.3-V Supply Operation**
- **Available in SOIC and MSOP Packages**

APPLICATIONS

- **Level Translation**
- **622-MHz Central Office Clock Distribution**
- **High-Speed Network Routing**
- **Wireless Basestations**
- **Low Jitter Clock Repeater[1]**

(1) The signaling rate of a line is the number of voltage transitions that are made per second expressed in the units bps (bits per second).
DESCRIPTION

This high-speed translator/repeater is designed for signaling rates up to 1.5 Gbps to support various high-speed network routing applications. The driver output is compatible with current-mode logic (CML) levels, and directly drives 50-Ω or 25-Ω loads connected to 1.8-V, 2.5-V, or 3.3-V nominal supplies. The capability for direct connection to the loads may eliminate the need for coupling capacitors. The receiver input is compatible with LVDS (TIA/EIA-644), LVPECL, and CML signaling levels. The receiver tolerates a wide common-mode voltage range, and may also be directly coupled to the signal source. The internal data path from input to output is fully differential for low noise generation and low pulse-width distortion.

The V_{BB} pin is an internally generated voltage supply to allow operation with a single-ended LVPECL input. For single-ended LVPECL input operation, the unused differential input is connected to V_{BB} as a switching reference voltage. When used, decouple V_{BB} with a 0.01-μF capacitor and limit the current sourcing or sinking to 400 μA. When not used, V_{BB} should be left open.

This device is characterized for operation from −40°C to 85°C.

FUNCTIONAL DIAGRAM

EYE PATTERN

1.5 Gbps
2^{23}-1 PRBS

Vertical Scale = 500 mV/div

750 MHz

Horizontal Scale = 200 ps/div

V_{CC} = 3.3 V, T_A = 25°C, $|V_{ID}|$ = 200 mV, V_{IC} = 1.2 V, V_{TT} = 3.3 V, R_T = 50 Ω

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

⚠ These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

ORDERING INFORMATION

PART NUMBER	PART MARKING	PACKAGE	STATUS
SN65CML100D	CML100	SOIC	Production
SN65CML100DGK	NWB	MSOP	Production

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range unless otherwise noted[1]

				UNIT
V_{CC}	Supply voltage range[2]			–0.5 V to 4 V
I_{BB}	Sink/source			±0.5 mA
	Voltage range, (A, B, Y, Z)			0 V to 4.3 V
	Electrostatic discharge	Human Body Model [3]	A, B, Y, Z, and GND	±5 kV
			All pins	±2 kV
		Charged-Device Model[4]	All pins	±1500 V
	Continuous power dissipation			See Dissipation Rating Table
T_{stg}	Storage temperature range			–65°C to 150°C
	Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds			260°C

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values, except differential I/O bus voltages, are with respect to network ground terminal.
(3) Tested in accordance with JEDEC Standard 22, Test Method A114-A.7.
(4) Tested in accordance with JEDEC Standard 22, Test Method C101.

RECOMMENDED OPERATING CONDITIONS

			MIN	NOM	MAX	UNIT
V_{CC}	Supply voltage		3	3.3	3.6	V
V_{TT}	Terminator supply voltage	3.3-V nominal supply at terminator	3	3.3	3.6	V
		2.5-V nominal supply at terminator	2.375	2.5	2.625	
		1.8-V nominal supply at terminator	1.7		1.9	V
$|V_{ID}|$	Magnitude of differential input voltage		0.1		1	V
	Input voltage (any combination of common-mode or input signals)		0		4	V
V_{BB}	Output current				400	µA
T_A	Operating free-air temperature		–40		85	°C

PACKAGE DISSIPATION RATINGS

PACKAGE	$T_A \leq 25°C$ POWER RATING	DERATING FACTOR[1] ABOVE T_A = 25°C	T_A = 85°C POWER RATING
DGK	425 mW	3.4 mW/°C	221 mW
D	725 mW	5.8 mW/°C	377 mW

(1) This is the inverse of the junction-to-ambient thermal resistance when board-mounted and with no air flow.

SWITCHING CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	NOM[1]	MAX	UNIT
t_{PLH}	Propagation delay time, low-to-high-level output	$R_T = 50\ \Omega$ or $R_T = 25\ \Omega$, See Figure 4	250		800	ps
t_{PHL}	Propagation delay time, high-to-low-level output		250		800	ps
t_r	Differential output signal rise time (20%–80%)				300	ps
t_f	Differential output signal fall time (20%–80%)				300	ps
$t_{sk(p)}$	Pulse skew ($|t_{PHL} - t_{PLH}|$)[2]			0	50	ps
$t_{sk(pp)}$	Part-to-part skew[3]	$V_{ID} = 0.2$ V			100	ps
$t_{jit(per)}$	Period jitter, rms (1 standard deviation)[4]	750 MHz clock input[5]		1	5	ps
$t_{jit(cc)}$	Cycle-to-cycle jitter (peak)[4]	750 MHz clock input[6]		8	27	ps
$t_{jit(pp)}$	Peak-to-peak jitter[4]	1.5 Gbps 2^{23}-1 PRBS input[7]		30	70	ps
$t_{jit(det)}$	Deterministic jitter, peak-to-peak[4]	1.5 Gbps 2^7–1 PRBS input[8]		25	65	ps

(1)   All typical values are at 25°C and with a 3.3-V supply.
(2) $t_{sk(p)}$ is the magnitude of the time difference between the t_{PLH} and t_{PHL}.
(3) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any specified terminals of two devices when both devicesoperate with the same supply voltages, at the same temperature, and have identical packages and test circuits.
(4)   Jitter parameters are ensured by design and characterization. Measurements are made with a Tektronix TDS6604 oscilloscope runningTektronix TDSJIT3 software. Agilent E4862B stimulus system jitter 2 ps $t_{jit(per)}$, 16 ps $t_{jit(cc)}$, 25 ps $t_{jit(pp)}$, and 10 ps $t_{jit(det)}$ has beensubtracted from the values.
(5) $V_{ID} = 200$ mV, 50% duty cycle, $V_{IC} = 1.2$ V, $t_r = t_f \leq 25$ ns (20% to 80%), measured over 1000 samples.
(6) $V_{ID} = 200$ mV, 50% duty cycle, $V_{IC} = 1.2$ V, $t_r = t_f \leq 25$ ns (20% to 80%).
(7) $V_{ID} = 200$ mV, $V_{IC} = 1.2$ V, $t_r = t_f \leq 0.25$ ns (20% to 80%), measured over 100k samples.
(8) $V_{ID} = 200$ mV, $V_{IC} = 1.2$ V, $t_r = t_f \leq 0.25$ ns (20% to 80%). Deterministic jitter is sum of pattern dependent jitter and pulse width distortion.

APPLICATION INFORMATION

For single-ended input conditions, the unused differential input is connected to V_{BB} as a switching reference voltage. When V_{BB} is used, decouple V_{BB} via a 0.01-μF capacitor and limit the current sourcing or sinking to 0.4 mA. When not used, V_{BB} should be left open.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
